COMPANY OVERVIEW

A technically focused partner for groundwater measurement, water monitoring and field services.

Who We Are Sri Laxmi Sai Scientific Services supports industries, infrastructure projects, institutions and other water users with scientific instruments, groundwater services and field-oriented technical support.	Technical Leadership Managed by Gangishetti Anil, Proprietor M.Sc. Geology, combining field understanding with practical implementation and documentation support.
Operating Focus Groundwater monitoring • flow measurement • hydrogeological assessment • borewell services • recharge and rainwater harvesting • technical support.	Service Reach Hyderabad-based operations with capability to support projects across India, subject to scope, site conditions and deployment requirements.

OUR CORE CAPABILITIES

- Ultrasonic and smart water flow measurement solutions with telemetry/dashboard options.
- Digital Water Level Recorder (DWLR) and groundwater-level monitoring systems.
- Piezometer-related supply, calibration coordination and technical service support.
- Groundwater auditing, hydrogeological studies and compliance-oriented documentation.
- Borewell drilling support, yield testing, site assessment and water-related field activities.
- Rainwater harvesting and groundwater recharge solutions for sustainable water management.

OUR APPROACH

We combine measurement technology, field coordination and technical documentation to help customers move from site requirement to installation, monitoring, service and reporting with one accountable point of coordination.

SMART WATER MONITORING SOLUTIONS

Connected instrumentation designed for measurable water use and groundwater visibility.

Smart Flow Measurement

Groundwater Level Monitoring

Inline / pipeline application

SOLUTION STACK

Flow Meters

Smart ultrasonic and digital flow measurement for water pipelines, with options for live telemetry and dashboard-based visibility.

DWLR Systems

Digital water-level monitoring for borewells and groundwater assets, supporting automated logging and remote data access.

Telemetry & Connectivity

4G / NB-IoT and dual-SIM connectivity options for continuous or scheduled data transmission, subject to network availability.

Protection & Field Reliability

Field-ready enclosures and instrumentation practices intended for demanding outdoor installations and continuous monitoring.

WHY CONNECTED MONITORING MATTERS

- Provides time-stamped, accessible data instead of relying only on manual site readings.
- Helps compare water consumption, groundwater levels and operational patterns over time.
- Supports faster identification of communication or instrument issues through centralized visibility.
- Creates a stronger documentation trail for internal water management and compliance workflows.

FLOW MEASUREMENT

Practical water flow monitoring for industrial, commercial and project applications.

Representative smart ultrasonic flow meter image from the existing SLS brochure library.

Smart Ultrasonic Flow Meter

For suitable water applications, including telemetry-enabled monitoring options; selection depends on pipe and site conditions.

Digital Flow Meter

Local digital measurement for applications where dependable on-site reading is required.

Telemetry & Dashboard

Remote visibility of water data through supported connectivity and cloud monitoring workflows.

Project Support

Requirement review, quotation, dispatch, installation assistance and post-installation coordination.

TYPICAL APPLICATION AREAS

Industrial water consumption • borewell extraction monitoring • process water lines • utilities • commercial facilities • institutional campuses • project sites • compliance-oriented monitoring.

Selection is based on application, pipe/borewell conditions, required flow range, connectivity, power, installation constraints and the customer specification.

GROUNDWATER LEVEL & PIEZOMETER SOLUTIONS

Measurement, calibration coordination and technical support for groundwater monitoring assets.

Groundwater level monitoring concept

DWLR / Water-Level Recorder Automated groundwater-level logging with telemetry options for remote monitoring and reporting.	Piezometers Supply and technical support for pressure-based groundwater monitoring applications.
Calibration Support Calibration coordination, documentation and service workflows, including NABL-linked support where applicable.	Field Identification Serial / FM based handling helps track individual instruments and site history.

SERVICE WORKFLOW FOR INSTRUMENTS

- Identify the instrument and serial / FM number.
- Review the reported fault, calibration need or site condition.
- Coordinate service, calibration or technical action as required.
- Share relevant service records, observations and completion documentation.

ENGINEERING & ENVIRONMENTAL SERVICES

End-to-end groundwater and water-management support for project and compliance needs.

Representative borewell drilling field image from the existing SLS brochure library.

Groundwater Auditing Review groundwater extraction, water-use records and documentation needs for compliance workflows.	Hydrogeological Impact Assessment Site-level assessment for industrial, infrastructure and urban projects based on scope and available data.
Rainwater Harvesting & Recharge Support for recharge pits, percolation trenches, rooftop harvesting and suitable recharge measures.	Borewell Drilling & Yield Testing Drilling coordination, yield measurement, hydrogeological assessment and field support.

PROJECT DELIVERY MODEL

A clear workflow from enquiry to monitoring and service.

01 Requirement Study Understand site, application, instrument requirement, pipe / borewell details, connectivity needs and customer specifications.	02 Technical & Commercial Offer Prepare product selection, scope, quotation / PI, lead time and commercial terms based on the requirement.
03 Supply & Documentation Coordinate dispatch, invoice, test / calibration certificates and supporting documents as applicable.	04 Installation / Commissioning Support installation, configuration and connection to the required dashboard / monitoring workflow where included.
05 Monitoring & Service Handle service requests, communication issues, calibration support, repairs and technical follow-up.	06 Reporting & Close-Out Provide relevant service reports, observations and completion documentation as required.

WHAT CUSTOMERS CAN EXPECT

- Single-point coordination for product and service communication.
- Application-focused selection rather than one-size-fits-all supply.
- Clear documentation and identification of instruments and site requirements.
- Responsive follow-up for service, connectivity and calibration coordination.
- Focus on measurable water data and practical field outcomes.

IMPORTANT NOTE

Product models, communication protocols, certifications, portal compatibility, delivery timelines and service scope can vary by project. Final technical suitability is confirmed against the customer specification and site conditions before order execution.

SELECTED CUSTOMERS & RECENT ENGAGEMENTS

A representative selection of organizations from our recent customer records. Logos can be added to the website when approved / available.

MRF Limited	Adani Group	HETERO Pharma
Gland Pharma	Dr. Reddy's Laboratories	Zuari Cement
Pidilite Industries Limited	Vimta Labs	Granules India Limited
ITC Limited	Mahindra University	Schneider Electric India Pvt. Ltd.
Creamline Dairy Products Ltd	HBL Engineering Limited	Medha Rail Pvt. Ltd.
Aparna Enterprises Limited	Deccan Cements Limited	Keerthi Industries Limited
Globion India Pvt Ltd	Kamineni Health Services Private Limited	Suguna Foods Private Limited
Unique Biotech Limited	Mold-Tek Packaging Ltd	Rane Brakes
J K Fenner India Limited	Natco Pharma	Saptagiri Laboratories Pvt Ltd
Ji Tech India Private Limited	MPL Steel Industries Pvt Ltd	PowerCube Products & Services
SDI Business Services India Pvt Ltd	BioMerieux India Pvt Ltd	Medha Servo Drives Private Limited
Coromandel International Ltd	Reactive Metals of India Pvt Ltd	South Asian Ceramic Tiles Pvt Ltd
Whitefield Bio Products Pvt Ltd	BN Pack Corrugated Pvt Ltd	Sudhakar PVC Products Pvt Ltd
Hindustan Foods Limited	Mahalaxmi Profiles Pvt. Ltd.	Voith Turbo Private Limited
Sibelco	Radico Khaitan	Pawan Refineries Private Limited
TKIL Industries Pvt. Ltd.	Pitti Engineering Limited	Aptar Pharma India Pvt Ltd

Representative selection from recent customer records supplied for this brochure. Customer logos and project-specific claims should be published only where appropriate authorization or public-domain branding permits.

CONTACT & NEXT STEPS

Tell us your application, site condition or instrument requirement — we will help define the right scope.

CLOSING STATEMENT

Reliable measurement is the foundation of responsible water management. We aim to make field instrumentation, groundwater understanding and technical support practical, connected and document-ready for every project we undertake.
